QuickBite: why did refunds jump in Sep–Oct 2026?

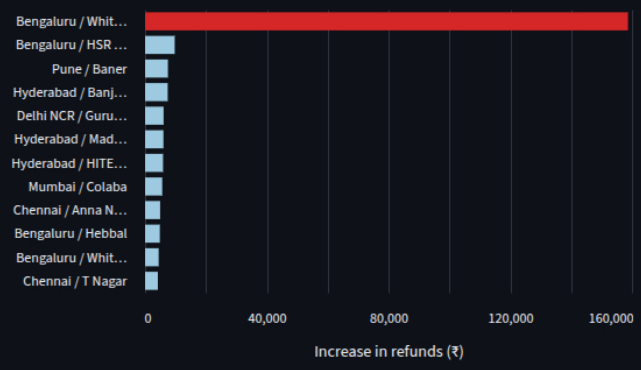

Source: QUICKBITE_DB.RAW (refunds attributed to the month the order was placed; GMV = order value excl. delivery fee; late = >45 min placed→delivered).

October refunds	Refund % of GMV (Oct)	October orders	Share of refund increase from one zone
₹712,841	4.76%	30,016	78%
↑ +40% vs Aug	↑ +1.06 pts vs Aug	↑ +9.5% vs Aug	↑ Bengaluru / Whitefield-East

Monthly trend

Refund increase by zone, Aug → Oct

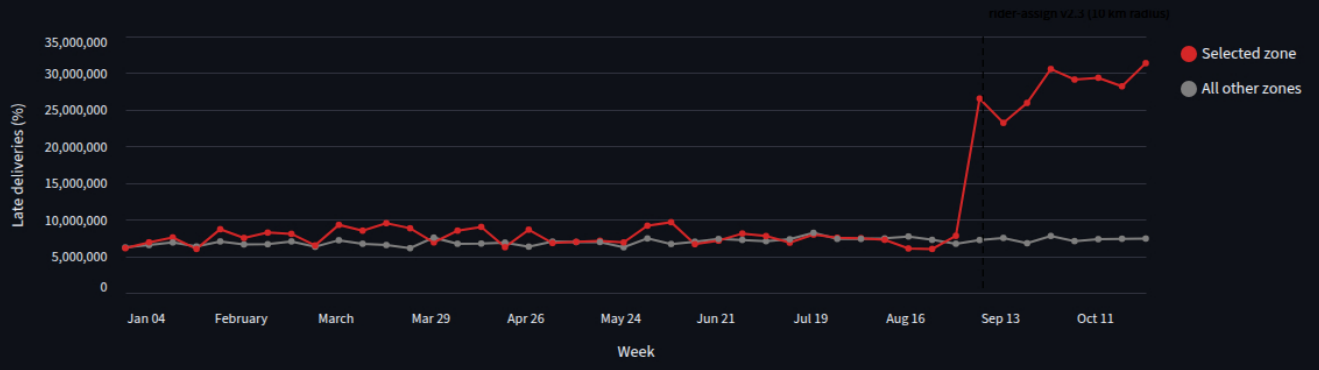

Delivery lateness by zone

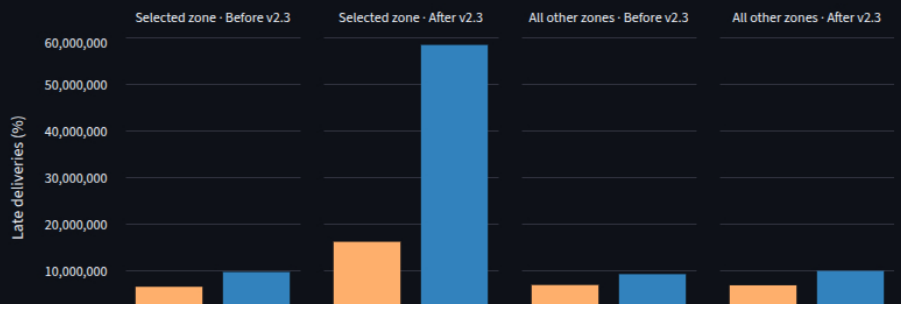

Zone

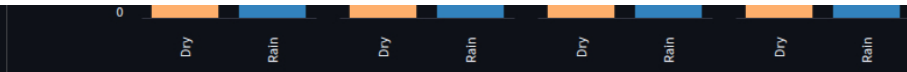

Bengaluru / Whitefield-East

Weekly late % — Bengaluru / Whitefield-East vs all other zones

Rain effect — Bengaluru / Whitefield-East (Aug–Oct)

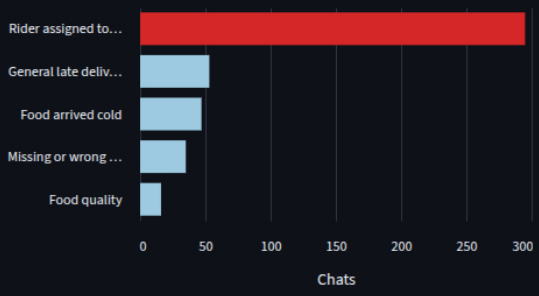

Rain = RAIN_MM > 0 in the order's city and hour (WEATHER_HOURLY).

Red herring: Cloud Kitchens Hub (launched 2026-09-01)

Group	Aug refunds ₹	Oct refunds ₹	Increase ₹	Share o
Whitefield-East	55,180	213,845	158,665	
Everything else	453,079	488,732	35,653	
Cloud Kitchens Hub	0	10,264	10,264	

The 60 Cloud Kitchens Hub brands launched the same week the spike started, but they sit in HITEC City (Hyderabad), serve ~1% of orders, and explain only ~5% of the refund increase. Their refund rate (~6.5%) is worth watching, but they did not drive the spike.

What customers are saying — Whitefield-East chats since 2026-09-08

▾ ALL THEMES (446)

Users report numerous issues with food delivery, including long wait times (often over 60 minutes), cold food, wrong orders, missing items, and poor food quality. Many complaints mention riders being assigned from far away (up to 9 km), leading to extended delivery times. Some users express frustration with the app's performance, citing rain as no excuse for the delays.

› Rider assigned too far away (295)

› General late delivery (53)

› Food arrived cold (47)

› Missing or wrong item (35)

› Food quality (16)

Recommendation

Root cause: rider-assign **v2.3** (released 2026-09-08, assignment radius expanded to 10 km). In Whitefield-East it pulls riders from ~6 km away instead of ~2 km, pickup waits rise ~6 min, and late deliveries go from ~7% to ~28% (~58% in rain). Other zones are unchanged. This one zone accounts for ~78% of the company-wide refund increase, driven by *Late delivery* and *Cold food* refunds.

Actions:

1. Cap the assignment radius for Whitefield-East (or roll back to v2.2 behaviour) immediately, at least during rain.
2. Investigate rider supply in Whitefield-East — the wider radius suggests too few local riders.
3. Add a per-zone guardrail metric (late % and refund % vs baseline) to future rider-assign rollouts.
4. Monitor Cloud Kitchens Hub refund rate (~6.5%) separately — real, but small.
